

VGM 54

DC Motors with permanent magnet field

Motor series VGM 5480
up to 250 Watts output power

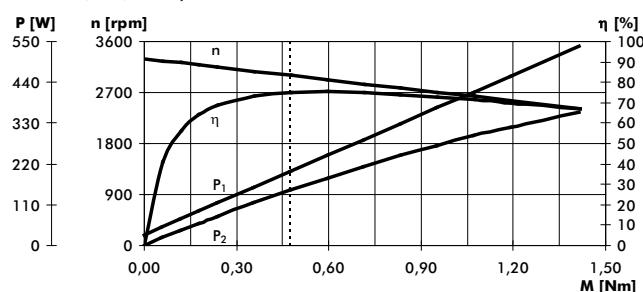

Type	Dimension L
VGM 5440	162
VGM 5480	202

Operation characteristics:

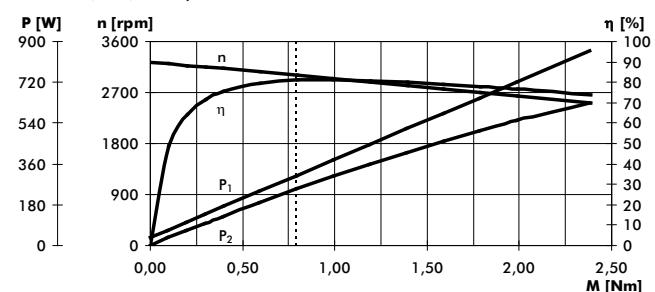

n - Speed
 η - Efficiency

P₁ - Input power
 P₂ - Output power

VGM5440, 24V, 3000rpm

VGM5480, 24V, 3000rpm

Motor design:

The standard DC Motors series VGM 54 are equipped with plain shaft and round output flange in design B14. Due to lifetime optimisation of the carbon brushes it was possible to eliminate the brush holder opening.

The cable comes to the outside via cable gland.

Flange mounting with 4 threads, see drawing.

Rotating direction:

The rotating direction can be changed by inverting the connections.

Order example

Motor

VGM 5480

24 V, 3000 rpm

Other voltages, speeds, radial cable outlet and spezial designs on request.

Features:

- High acceleration because of small moments of inertia
- Long brush lifetime because of optimisation of the brush holder
- Robust mechanical structure with steel tube housing and aluminium end plates with tension rod fixing

Tolerances acc. to standard VDE 0530. $\pm 10\%$ is valid for not VDE mentioned tolerances.

The values mentioned in the table are valid for supply with DC voltage with allowable harmonic contingent up to 5%
For undulatory current with increased harmonic contingent the rated motor values must be multiplied by 0,7.

¹⁾ The values are valid for operation in temperature-ranges from 0 up to 40°C and it is not allowed to exceed them, even not for a short-time, to avoid magnet-weakening.
